STAYING COOL THIS SUMMER

(SANTA BARBARA, Calif.) - Keeping cool when temperatures reach record highs isn't just about comfort. Dangerously high temperatures can result in heat-related illnesses ranging from heat cramps to heat exhaustion and heat stroke. The following tips can help you keep cool all summer.

1. Pay special attention to the elderly, infants, and anyone with a chronic illness, as they may dehydrate easily and be more susceptible to heat-related illnesses.

2. Don't forget that pets also need protection from dehydration and heat-related illnesses too.

3. Alter your pattern of outdoor exercise to take advantage of cooler times (early morning or late evening). If you can't change the time of your workout, scale it down by doing fewer minutes, walking instead of running, or decreasing your level of exertion.

4. Wear loose-fitting clothing, preferably of a light color. Cotton clothing will keep you cooler than many synthetics.

5. Fill a spray bottle with water and keep it in the refrigerator for a quick refreshing spray to your face after being outdoors. Keep plastic bottles of water in the freezer; grab one when you're ready to go outside. As the ice melts, you'll have a supply of cold water.

6. Fans can help circulate air and make you feel cooler even in an air-conditioned house.

7. Combat dehydration by drinking plenty of water along with sports drinks or other sources of electrolytes. Avoid caffeine and alcohol as these will promote dehydration.

8. Instead of hot foods, try lighter summer fare including frequent small meals or snacks containing cold fruit or low fat dairy products. As an added benefit, you won't have to cook next to a hot stove.

9. If you don't have air-conditioning, arrange to spend at least parts of the day in a shopping mall, public library, movie theater, or other public space that is cool.

10. Finally, use common sense. If the heat is intolerable, stay indoors when you can and avoid activities in direct sunlight or on hot asphalt surfaces.
