Important Health Information for Your New Cat/Kitten

Feline retroviral diseases:

- All cats/kittens 8 weeks of age and older are tested for Feline Leukemia Virus.
- Cats 6 months of age or older are also tested for Feline Immunodeficiency Virus (FIV).
- If you adopt a kitten less than 6 months of age, please discuss FIV testing with your veterinarian.

Vaccinations:

- All cats are given FVRCP vaccines.
- Kittens are given a booster of FVRCP every 2-3 weeks until 4 months of age.
- If you adopt a kitten less than 4 months of age, you will need to follow up with FVRCP boosters and rabies vaccination with your veterinarian.
- All cats/kittens over 4 months of age are given a rabies vaccine.
- Cats are not vaccinated for Feline Leukemia Virus.
- Please discuss the Feline Leukemia vaccine with your veterinarian.

Parasite control:

- Fleas are very common in our area. Your new pet received a dose of flea medication and this date is noted in the records. Please consult with your veterinarian for recommendations for monthly flea control.
- All cats and kittens are given a basic de-wormer. Your veterinarian may recommend a fecal test to check for intestinal parasites.
